# GAGAN RAMESH

**Quality Engineering Leader | Automation, DevOps & AI/LLM Test Strategy**

Bengaluru, India | +91 9964554199 | gaganramesh@gmail.com
linkedin.com/in/gaganramesh32 | github.com/GaganRamesh32 | gaganramesh32.github.io

## PROFILE SUMMARY

I lead Quality Engineering and AI Quality Governance across Banking, Financial Services, and Insurance programs, shaping quality strategy for both traditional and AI-driven platforms. My responsibilities include defining enterprise automation roadmaps, AI evaluation frameworks, governance models, and regression testing strategies for LLM, RAG, and autonomous agent systems. With extensive experience in regulated environments, I have led quality initiatives for complex, high-risk releases serving global clients.

- 18+ years of Quality Engineering, Test Automation and Test Management experience, exceeding the 10+ year requirement for senior QA Manager roles
- Deep Banking & Financial Services domain exposure: Charles Schwab, Aviva Life Insurance, Westpac Bank, State Street, ING Bank, Lehman Brothers
- Measurable delivery impact at Testhouse: 84% automation coverage; releases doubled from 6 to 12 a year (2x faster delivery) with >95% milestone adherence; $200K annual savings and 2,000+ testing hours saved annually; critical business-flow escaped defects reduced from 15 to 3 over 3 release cycles in 3 months; >4.8/5 client satisfaction across 8 major customers
- People leadership: 40 engineers upskilled in Automation and AI-driven testing, attrition reduced from 18% to 8%, and a stronger next-layer leadership pipeline
- Implemented Unified Automation Framework using TypeScript + Cucumber to automate Web, API and Mobile (Android/iOS) applications. **GitHub repo code walkthrough available in interview**
- DevOps & Continuous Testing: CI/CD pipeline integration using Azure DevOps, Jenkins, Bamboo, Git and Maven. **GitHub repo code walkthrough available in interview**
- Automation governance and executive reporting: automation maturity assessment, ROI analysis, KPI dashboards, and quality transformation roadmaps
- Prepared and implemented AI Test Strategy & Evaluation of an on-premise multi-agent platform, plus a multilingual AI assistant (voice and text) for a leading government organization in the GCC region
- AI-assisted test automation: using Claude (Anthropic) to generate and maintain automation scripts, accelerate framework development, and speed up regression suite creation
- Hands-on exposure to AI-powered QE tooling: evaluating Thumba, an AI-driven QE platform, and contributing to the development of an in-house, AI-powered codeless test automation tool
- Built an LLM Evaluation & Regression Testing Framework for a RAG-based customer support assistant (Python, Pytest, DeepEval/Ragas, GitHub Actions) — LLM-as-judge scoring, hallucination detection, adversarial testing and RAG faithfulness evaluation. **GitHub repo code walkthrough available in interview**
- Working on building a platform for regression testing and AI evaluation of LLMs, RAG pipelines and agents. It covers four pillars AI for testing, Testing of AI, AI Security & Performance and Continuous AI QA. **GitHub repo code walkthrough available in interview**
- Built an Agile DevSecOps delivery pipeline on GitHub Actions: issue-to-PR traceability, a Playwright end-to-end suite as a required check, and deployments gated on test results. Public example: **github.com/GaganRamesh32/todomvc**

## CORE SKILLS

**Test Automation:** Selenium WebDriver, Playwright, Tosca, UFT/QTP, TestComplete, BDD Cucumber

**DevOps & CI/CD:** Azure DevOps, Azure Pipelines, GitHub Actions, Jenkins, Bamboo, Git, Maven, Continuous Integration & Continuous Testing

**API Testing:** Postman, REST Assured, SOAP UI, UFT API, Parasoft, Web Services Testing

**Mobile Automation:** Appium, WebDriver I/O, Android & iOS Test Automation

**Programming:** Java, JavaScript, TypeScript, VBScript, SQL, Python

**Test & Defect Mgmt:** Azure DevOps Test Plans, ALM, MTM, TFS, Zephyr, Jira, RCA Analysis

**Quality Engineering:** Automation Strategy & CoE, Risk-Based Testing, Shift-Left, Test Data Management, Release Validation

**Governance & Reporting:** Automation Maturity Assessment, ROI Tracking, KPI & Executive Dashboards, SLA Reporting, Allure, Power BI

**AI-Assisted Automation:** Claude (Anthropic) for AI-driven test script generation, framework acceleration and automation maintenance

**AI-Powered QE Tooling:** Evaluation of AI-driven QE platforms (Thumba); contributor to an AI-powered codeless test automation tool (Playwright, Appium, WebDriver.io, REST Assured, PostgreSQL)

**LLM / RAG Evaluation:** Python, Pytest, DeepEval, Ragas, LLM-as-judge scoring, hallucination & adversarial testing, RAG faithfulness evaluation, regression comparison, AI red teaming (prompt injection, jailbreaks, data leakage), GitHub Actions CI/CD

**AI Quality Governance:** AI evaluation frameworks, governance models, quality gates and regression testing strategies for LLM, RAG and autonomous agent systems

**Domain:** Banking, Financial Services, Insurance, Securities, Telecom

## CERTIFICATIONS

- Certified Product Consultant (QTP, Mercury)
- PEGA Certified System Architect (CSA)
- Project Lead Certification Program (PLCP, Wipro)

## PROFESSIONAL EXPERIENCE

**Associate Director - Automation** — Testhouse Private Limited

*Trivandrum, India | Dec 2021 – Present*

- Raised automation coverage to 84% and doubled release frequency from 6 to 12 releases a year (2x faster delivery) with >95% milestone adherence
- Saved 2,000+ testing hours and $200K annually; reduced critical business-flow escaped defects from 15 to 3 over 3 release cycles in 3 months
- Upskilled 40 engineers in Automation and AI-driven testing, strengthened the next-layer leadership pipeline and reduced attrition from 18% to 8%; achieved >4.8/5 client satisfaction across 8 major customers
- Defined and implemented automation strategy and roadmap across functional, regression, integration and end-to-end testing for enterprise banking, financial services and telecom programs
- Drove Continuous Testing and DevOps adoption through CI/CD integration using Azure DevOps, Bamboo and the Atlassian toolchain, embedding automated testing into deployment pipelines
- Designed and governed scalable hybrid automation frameworks — reusable libraries, object repositories, utilities and reporting — to improve automation efficiency and maintainability
- Led automation modernization initiatives, migrating from legacy and manual automation platforms to unattended, Selenium BDD-based automation frameworks
- Owned Quality Engineering functions end-to-end: test strategy, test planning, automation governance, tooling decisions, execution management and release readiness assessments
- Established automation governance processes and tracked KPIs — automation coverage, defect leakage, execution stability, regression cycle time — with executive dashboard reporting
- Led API, web services and integration testing initiatives using SOAP UI and related tooling, ensuring end-to-end validation of business-critical applications
- Led a 56-member team of automation leads, automation engineers and QA engineers across global onshore-offshore delivery in the GCC regions — resource planning, mentoring, capability building and stakeholder communication
- Facilitated quality governance forums, defect triage sessions, release reviews and Agile ceremonies (Sprint Planning, Backlog Grooming, PI Planning support, Daily Scrums)
- Adopted Claude (Anthropic) for AI-assisted test automation — generating and maintaining automation scripts and accelerating framework development, reducing automation build and maintenance time
- Evaluated Thumba, an AI-driven QE platform, for fit within the automation ecosystem
- Contributing to an in-development AI-powered codeless test automation tool built on Playwright, Appium, WebDriver.io, REST Assured and PostgreSQL
- Built an LLM Evaluation & Regression Testing Framework for a RAG-based customer support assistant (Python, Pytest, LLM API, DeepEval/Ragas, JSON test data, HTML reporting, GitHub Actions) — 100+ test cases covering LLM-as-judge scoring, hallucination detection, safety/adversarial testing, RAG faithfulness evaluation, regression comparison and quality thresholds with CI/CD-integrated reporting; using this to shape test strategy for AI evaluation on live engagements

**Account Manager** — Testhouse Private Limited (Client: National Bank of Bahrain)

*India | Apr 2023 – Jun 2025*

- Delivered end-to-end QA services, partnering with NBB on the group's strategic goals and digital transformation and enabling faster, more secure deployments
- Improved test execution efficiency by 4%, cutting testing cycle time by 500 hours per quarter and saving $50,000 annually
- Grew automation test design 6% month on month, adding 120 new test cases and improving coverage and reliability
- Reduced maintenance effort by 200 hours per month, translating to $20,000 in savings and higher system stability

- Optimized resource deployment, saving $80,000 per resource annually
- Accelerated test script design, completing 30 scripts ahead of schedule and enabling a product release 5 days earlier
- Increased early defect detection by 40%, reducing post-release issues and saving $30,000 in potential defect costs
- Achieved 15 key QA certifications across the team, driving a 25% improvement in overall performance and testing accuracy
- Cross-skilled 70% of the team across modules, improving flexibility and cutting project turnaround time by 15%
- Built strong customer relationships that supported renewals and continuous work for 2 years

**QA Project Manager** — Wipro (Client: Charles Schwab)
*Bengaluru, India; Phoenix / Austin, USA | Apr 2014 – Dec 2021*

- Managed global onshore-offshore delivery teams
- Received appreciation for the Workforce Transformation initiative to upskill all employees on the account

**Automation Consultant** — Wipro (Client: Charles Schwab)
*Bengaluru, India | Aug 2012 – Mar 2014*

- Performed due diligence, prepared automation test strategies and approach, designed and implemented a hybrid automation framework, and prepared dashboards, RCA, quality metrics and process improvements
- Designed and implemented coding standards and best practices across automation teams

**Automation Consultant** — Wipro (Client: Aviva Life Insurance)
*Norwich, UK | Aug 2011 – May 2012*

- Implementation and successful delivery of an automation regression test design, execution and maintenance project for their Health and General Insurance applications
- Received customer appreciation for the successful implementation of the automation process

**Test Lead** — Wipro (Client: Westpac Bank)
*Sydney, Australia | Sep 2010 – Jun 2011*

- Played the role of an automation lead by doing a feasibility study of the application for automation, designing a suitable automation framework that was robust, scalable and easily maintainable. The project was the merger of St George bank with Westpac bank and automation of the QA services helped reduce testing efforts

**Automation Engineer** — Wipro (Client: Telstra Telecom)
*Melbourne, Australia | May 2010 – Aug 2010*

- Created a regression suite, automated it using QTP and executed it to test a set-top box application

**Automation Engineer** — Wipro (Client: State Street)
*Bengaluru, India | Feb 2009 – Feb 2010*

- Automated the regression suite for the File Transfer System and Power Agent applications, which configure actions and conditions, define and schedule file transfer flows, run services, create dashboards and store flow metadata such as flow definitions, conditions and actions in the database

**Automation Engineer** — Wipro (Client: ING Bank)
*Amsterdam, Netherlands | May 2008 – Nov 2008*

- ING was rebuilding Internet Banking (IB) channel for improved Retail Banking experience for their customers. ING Viking banking application was to cater to the merger of INGBANK and POSTBANK. The automation of the regression suite was designed and executed by me

**Automation Engineer** — Wipro (Client: Lehman Brothers)
*Bengaluru, India | Apr 2007 – Apr 2008*

- The Global Cash and Collateral department (CCM) is an integral part of Treasury and is centrally located in the funding process, enabling real-time consolidation of funding data from various internal and external sources. The automation of the regression suite was designed, executed and maintained by me

## EDUCATION

**Bachelor of Mechanical Engineering**
Visvesvaraya Technological University, Mandya, India — May 2005
